

Compulsory Task 1

Follow these steps:

- As a java developer you have been tasked with creating a menu program that allows movie goers to purchase the type of tickets they would like from the *Olden Days Cineplex*
- The menu should run continuously and there should be no way for users to end the program
- There should be three options 1. Regular Adult Tickets for 3c each, 2. Student Tickets for 2c each and 3. Family Tickets for two adults and two children at 7c each
- The program should ask the user to select the type of tickets needed. If the first or second option are selected, the program should ask the user to enter the number of people in the group. However, if the third option is selected, the program should ask the user to enter the number of families as well as the number of additional children in the group (if any)
- The program should then calculate the total amount due, display it on the screen and ask the user to confirm their order
- Make sure that the user cannot select invalid options in the menu and that the number of people in the group is always greater than 0
